01 Executive Summary

YTL AI LABS

Z.AI

UNIVERSITY OF MALAYA

PEKOM

UM Hackathon 2026

Reclaim

EXECUTIVE SUMMARY

Reclaim is an **AI-powered** enterprise expense reimbursement platform designed to **fully automate** and streamline Finance reimbursement workflows that are currently manual, slow, and error-prone. Instead of Finance teams spending days reviewing receipts, cross-checking policies, and handling claims individually, Reclaim introduces an intelligent compliance layer that processes receipts instantly using AI, extracts structured data, detects anomalies, and evaluates each claim against company policies. Through a multi-agent system, it produces a clear verdict and **confidence score** for every submission — **automatically approving and disbursing payment for compliant claims**, or escalating exceptions to the Finance triage dashboard for human review. This transforms reimbursement **from a fully manual process into a seamless, end-to-end automated pipeline** — from receipt upload to payment disbursement — making it faster, more consistent, and scalable for growing organizations worldwide.

17.7%

of expense reports contain errors

Source : CCMonet

MYR 14.40

cost per claim

The problem Reclaim solves is measurable and compounding. A single expense claim takes **38 minutes and MYR 14.40** in combined employee, HR, and Finance time — and **17.7% of all claims contain errors**, each requiring a full resubmission cycle. At enterprise scale, this compounds across thousands of claims monthly into a **substantial operational cost** that adds no strategic value. Beyond cost, manual systems are **structurally blind to fraud — 13% of all global fraud cases** involve expense reimbursement, yet **no automated detection mechanism exists** in traditional workflows.

Reclaim

EXECUTIVE SUMMARY

Reclaim addresses this through **three structural capabilities no competitor currently offers in combination**: the **Policy Studio** — which machine-enforces HR's uploaded policy on every claim automatically; the **Fraud Trap** — which silently flags employee edits with risk scoring before claims reach Finance review; and **Finance-gated Auto Disbursement** — which closes the reimbursement cycle automatically once HR and Finance authorize, with no inter-department handoffs. Unlike SAP Concur's rule-based enforcement or Expensify's SMB-focused OCR, Reclaim evaluates each claim against the enterprise's actual uploaded policy document using **AI reasoning agents** — producing **per-receipt verdicts with full audit reasoning.**

Southeast Asia is home to approximately 71 million businesses, of which **~20,300 large enterprises across Malaysia and Indonesia** form Reclaim's immediate commercial target — with a long-term addressable base of **~122,800 large enterprises across Southeast Asia** and a global vision beyond. The serviceable addressable market for Malaysia and Indonesia alone is estimated at **RM 2.64 billion.** Reclaim enters this market through a vertical-first, pilot-led enterprise sales strategy targeting **CFOs** in **insurance, financial services, and professional services** — the three verticals with the highest reimbursement claim volumes and the most complex policy structures. A structured **3-month paid pilot at RM 30,000** — priced below most CFO discretionary spending limits — converts to a full annual enterprise license upon validated performance, with the pilot fee fully deducted from Year 1. Reclaim projects **6 clients and RM 1.25M** in total Year 1 revenue, scaling to **30 clients and RM 7.6M by Year 3.**

Reclaim

02 Industry Overview & Background

YTL AI LABS

Z.AI

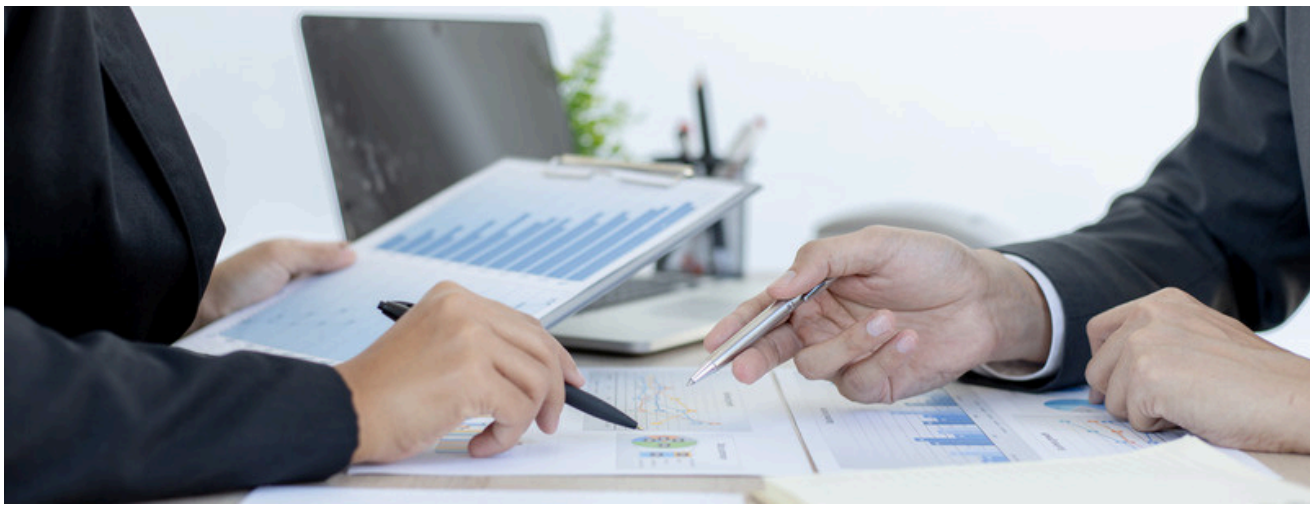
UNIVERSITY OF MALAYA

PEKOM

UM Hackathon 2026

Reclaim

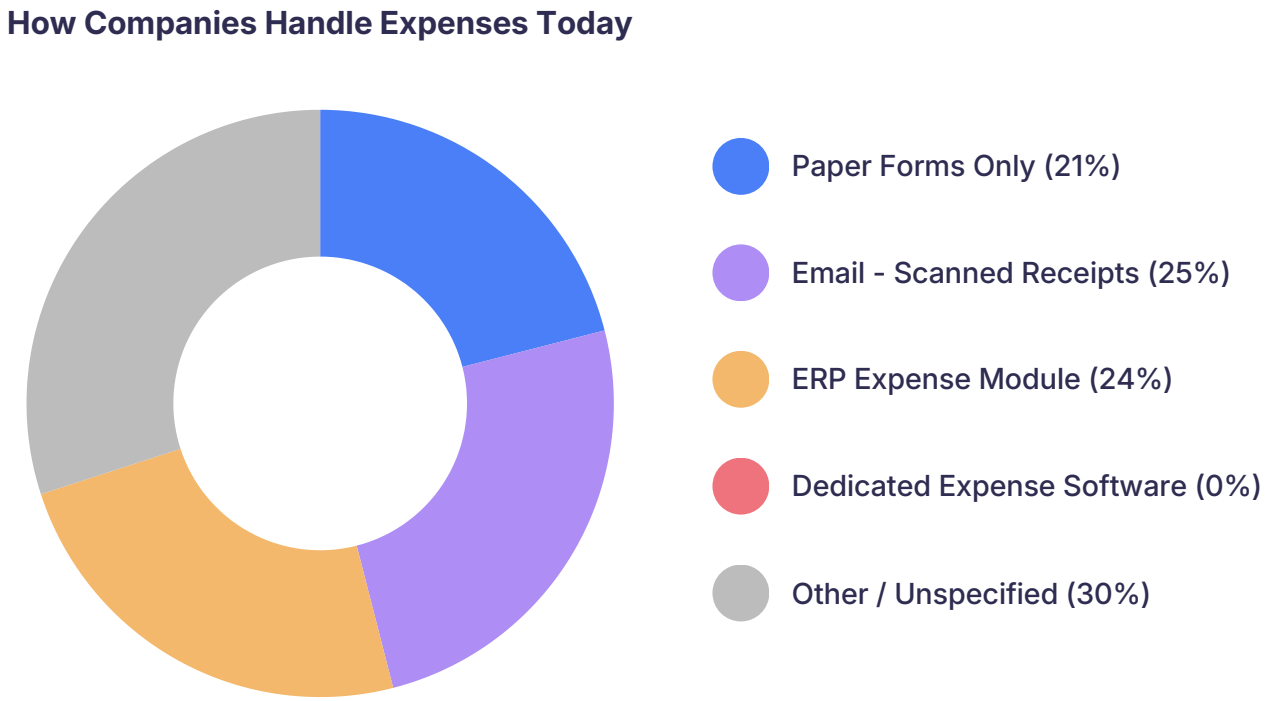
WHAT IS THE INDUSTRY?



Expense reimbursement management sits at the intersection of **Human Resources** and **Corporate Finance** — it is the operational process through which organizations compensate employees for **out-of-pocket business expenses** incurred on behalf of the company. This includes **travel costs, meals, accommodation, transportation, client entertainment**, and other work-related expenditures. For large enterprises with hundreds of employees making regular business trips and client engagements, this is not a peripheral HR function. It is a **high-volume, compliance-critical workflow** that directly affects **employee satisfaction, financial governance, and audit readiness.** Across Southeast Asia, this process sits within a rapidly transforming **enterprise HR automation industry**, as organizations shift away from paper-based workflows toward **digitalized, integrated platforms.**

Reclaim

HOW REIMBURSEMENT WORKS TODAY?



% of companies by submission method - APAC (FutureCFO)

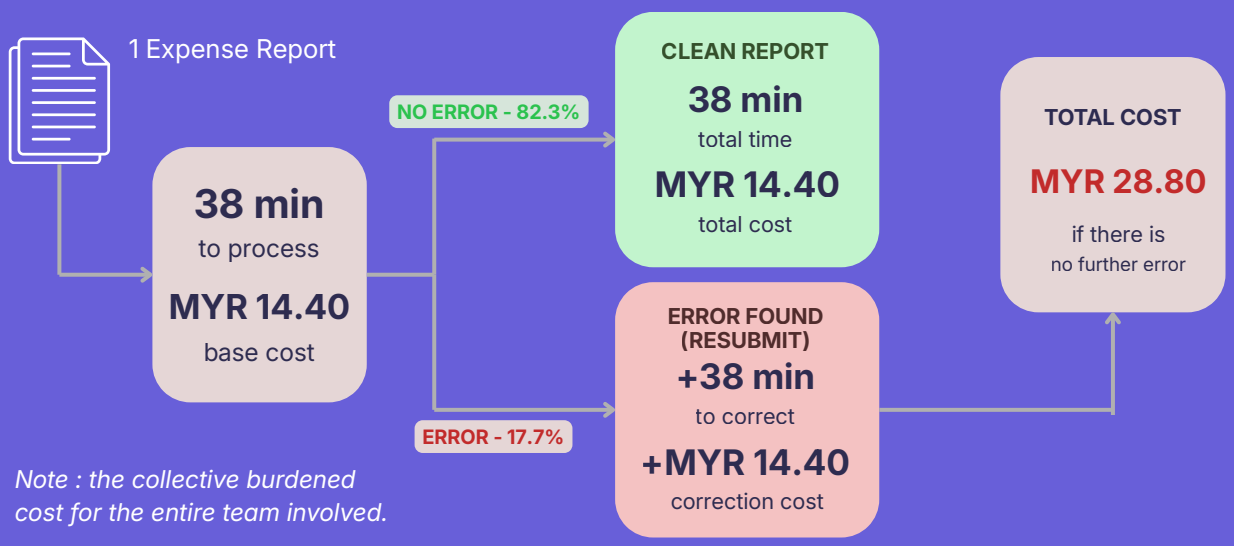
The typical reimbursement workflow has remained **largely unchanged for decades** — an employee incurs a business expense, **manually transcribes receipt details** into a Word document or paper form, and **submits via email** with scanned attachments of varying quality, while HR or Finance **manually verifies each line item** against a **policy PDF stored** on a shared drive. Despite the broader **digitalization** wave across Finance functions, expense reimbursement remains **one of the last workflows to be meaningfully automated** across organizations in the region.

Reclaim

WHY IT IS BROKEN?

Cost and Time Spent on Expense Reporting

Source : CCMonet



Note : the collective burdened cost for the entire team involved.

Beyond time and cost, manual workflows are **structurally blind to fraud** — with **no automated mechanism** to catch fake receipts, inflated amounts, or duplicate submissions.

13%

of all fraud cases globally involve expenses reimbursement

Global dataset ~2.000 real-world cases

11%

of occupational fraud cases worldwide are expense-related

Global occupational fraud study

24%

of employees admit charging personal purchases as company costs

Global employee survey

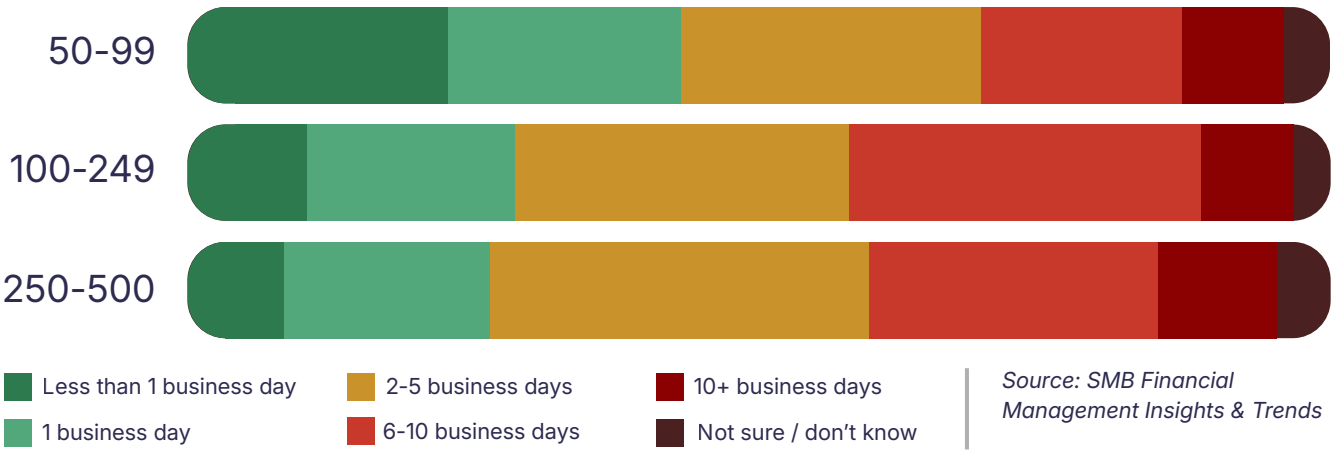
Reclaim

WHY IT IS BROKEN?

The frustration extends beyond Finance. Employees who submit claims have **no visibility into where their reimbursement stands** — and the wait is often far longer than it should be.

Average Time it Takes to Close The Books

by number of employees



Source: SMB Financial Management Insights & Trends

24% → 6%

same-day closure drops 4x as headcount grows

Scale makes the problem worse - not better

10%

of all companies take 10+ business days

Employees wait over 2 weeks before reimbursement reaches them

35%

of 250-500 employee companies take 6+ days

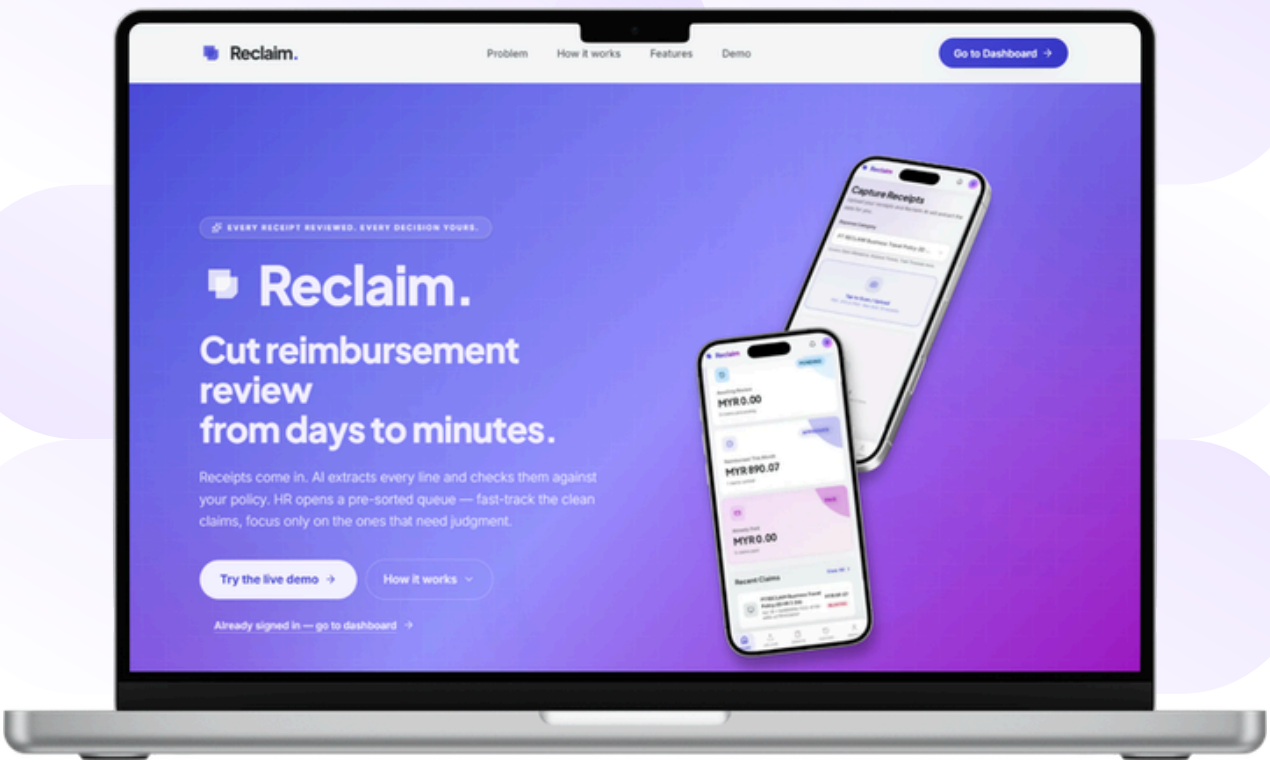
Larger enterprises disproportionately struggle with closing speed

Reclaim

WHY IT IS BROKEN?

Employees are effectively extending an interest-free loan to their employer every time they submit a claim — and the longer the wait, the greater the **damage to trust and morale.**

The result is a process that is **slow, expensive, inconsistent, and structurally blind to fraud** — creating the precise problem Reclaim was built to solve.



Reclaim

03 Product Overview

Z.AI

UNIVERSITY OF MALAYA

PEKOM

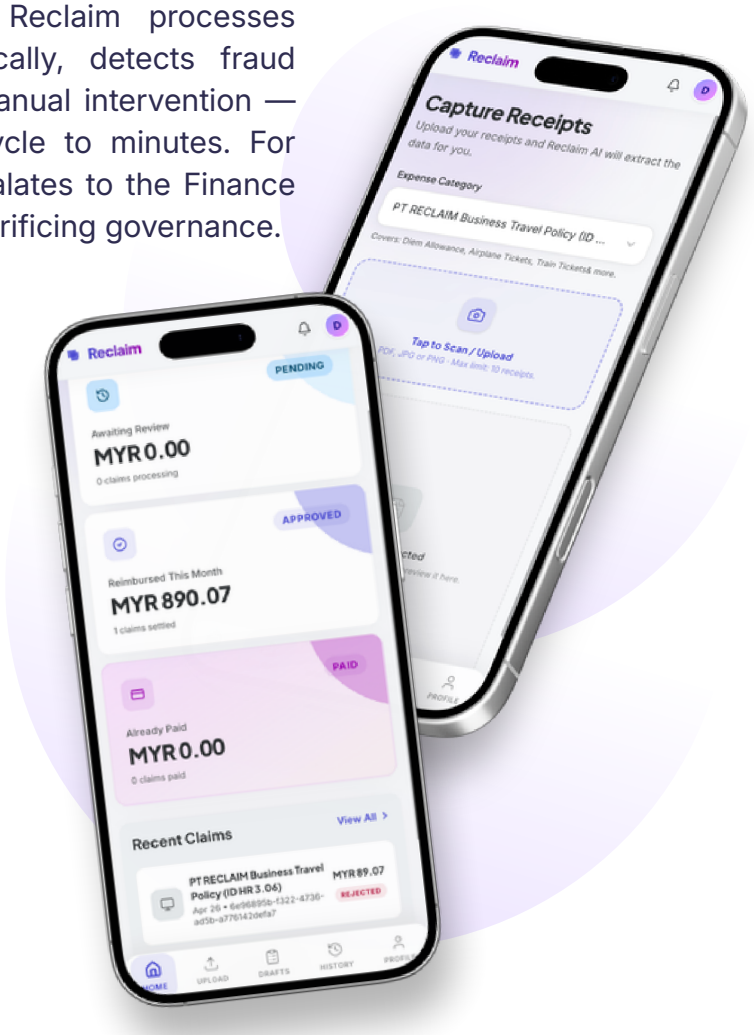
UM Hackathon 2026

Reclaim

BUSINESS INTRODUCTION

From receipt to reimbursement — in minutes, not days

Reclaim is an AI-powered enterprise expense reimbursement platform that replaces manual HR and Finance workflows with an intelligent, end-to-end automated pipeline. Reclaim processes receipts instantly, enforces policy automatically, detects fraud structurally, and disburses payment without manual intervention — reducing a five-to-ten day reimbursement cycle to minutes. For claims requiring human attention, Reclaim escalates to the Finance triage dashboard — ensuring speed without sacrificing governance.



Vision

To redefine enterprise reimbursement across Southeast Asia — where every claim is processed **in minutes**, **every policy is enforced automatically**, and every payment reaches employees **without delay**.

Mission

To eliminate the waiting in expense reimbursement by delivering an AI-powered pipeline that processes, evaluates, and disburses claims automatically — **turning days of manual processing into minutes.**

Reclaim

KEY FEATURES

01 Multi-receipt OCR submission

employees upload **up to 10 receipts** (JPEG, PNG, PDF) and the system extracts structured data within seconds using **vision and text LLM models**

02 Side-by-side verification with Fraud Trap

employees **review AI-extracted data** against the original receipt; **any edits are silently flagged** as audit signals with risk levels (HIGH/MEDIUM/LOW)

03 AI Compliance Evaluation

LangGraph-orchestrated ReAct agents evaluate each receipt against active policy conditions, producing per-receipt verdicts and an overall judgment (**AUTO APPROVE / AUTO PARTIAL APPROVE / AUTO REJECT/ MANUAL REVIEW**) with a confidence score

04 Policy Studio

HR uploads policy PDFs once; the AI extracts reimbursable categories and mandatory conditions as structured, queryable rules enforced on every claim automatically

05 Auto Disbursement

For claims where the **AI confidence score reaches ≥70%** and **the requested amount falls within the policy-defined threshold** for the eligible category, Reclaim **automatically approves and disburses payment** — or **immediately rejects** non-compliant claims — without requiring human intervention.

06 Efficiency by Exception Triage Dashboard

Claims that **return a partial approval** verdict are **escalated to the HR** and **Finance triage dashboard**, where the full audit trail, per-receipt AI reasoning, and fraud signals are surfaced for **human judgment** before any payment is authorized.

Reclaim

Z.AI

UNIVERSITY OF MALAYA

PEKOM

UM Hackathon 2026

Reclaim

MARKET NICHE

Reclaim targets **large enterprises worldwide**, with an initial commercial focus on **Malaysia and Indonesia** — organizations with complex reimbursement policy structures, rank-based entitlement caps, and mandatory compliance conditions. The primary buyer is the **CFO, Financial Controller, or Head of Audit accountable** for both operational efficiency and regulatory compliance.

71 Million — **Total Business in Southeast Asia**
Tech for Good ABD,2022

122,800 — **Large enterprises across SEA (0.2% of total)**
IEOM Society / ResearchGate SME table

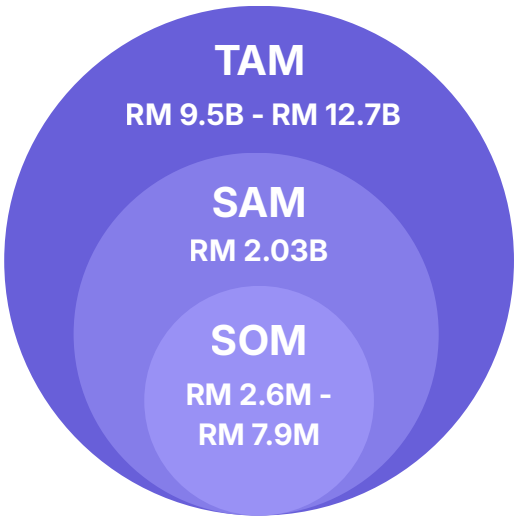
13,900 — **Large enterprises in Malaysia**
DOSM Malaysia, 2016

6,400 — **Large enterprises in Indonesia**
BPS Indonesia, 2018

Reclaim's immediate target: **~20,300 large enterprises across Malaysia and Indonesia** — with a long-term addressable base of **~122,800 large enterprises across Southeast Asia** as the platform scales regionally.

Reclaim

MARKET SIZING & MARKET DYNAMICS



TAM - TOTAL ADDRESSABLE MARKET

SEA expense management software market (~USD 2.0B in 2022). Total businesses in SEA: 71 million, of which 0.2% (~122.800) are large enterprises

SAM - SERVICEABLE ADDRESSABLE MARKET

~20.300 large enterprises in Malaysia & Indonesia x RM 100.000 average annual enterprise license value

SOM - SERVICEABLE OBTAINABLE MARKET

0.1%-0.3% market capture within 18 months - equivalent to approximately 20-60 enterprise clients.

Enterprise Digitalization Wave

Post-pandemic SEA enterprises are automating HR and Finance workflows. Expense reimbursement is the last remaining manual bottleneck in the employee lifecycle — the next item on every enterprise Finance technology roadmap.

AI Adoption Readiness

LLM-based document understanding has matured to production-grade quality. The technical barrier to AI adoption in compliance-sensitive Finance workflows has materially lowered. Reclaim is built precisely on this technological moment.

Compliance & Audit Pressure

Regulatory frameworks in Malaysia and Indonesia increasingly require structured, auditable expense records. Enterprise Finance teams need an immutable, timestamped chain of evidence from receipt to payment — Reclaim produces this automatically on every claim.

Growing Claim Volume

Every new employee hired generates more claims. At 12–36 claims per employee per year, a 5,000-employee enterprise generates up to 180,000 claims annually — a volume no manual Finance team can sustainably absorb as organizations scale.

Reclaim

05 Value Proposition & Competitive Advantage

YTL AI LABS

Z.AI

UNIVERSITY OF MALAYA

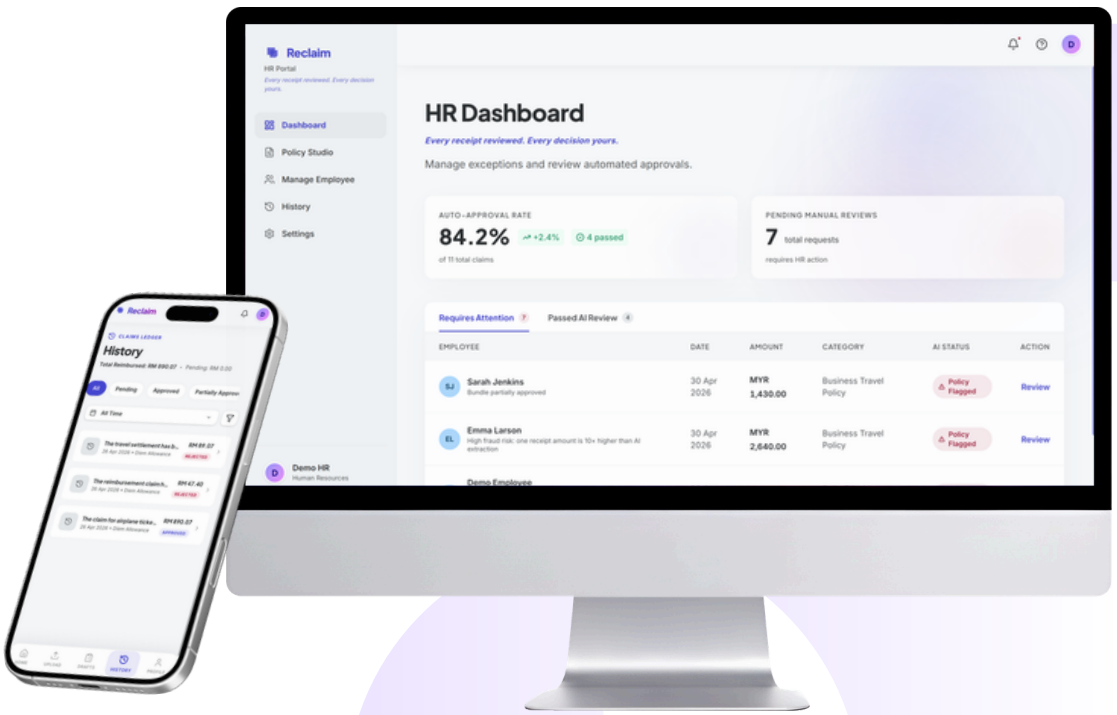
PEKOM

UM Hackathon 2026

Reclaim

VALUE PROPOSITION

Reclaim redefines the economics of expense reimbursement by replacing the manual review pipeline with an intelligent, end-to-end automated system — from receipt upload to payment disbursement. For compliant claims where the AI confidence score meets the defined threshold, Reclaim automatically approves and disburses payment without human intervention, eliminating the processing burden entirely. Only exceptions and partial approvals are escalated to the Finance triage dashboard — meaning Finance teams focus exclusively on the claims that genuinely require human judgment, while the majority are settled automatically. This directly multiplies Finance throughput without increasing headcount, and reduces a five-to-ten day reimbursement cycle to minutes.



Reclaim

COMPETITIVE ADVANTAGE

Unlike generic document OCR tools or standalone apps, Reclaim's moat is built on three structural capabilities that manual workflows cannot replicate:

The Policy Studio (Automated Compliance)

Ensures HR's specific policy intent is machine-enforced on every single claim automatically, entirely removing inter-reviewer inconsistency.

The Fraud Trap (Risk Mitigation)

Silently records every employee edit of AI-extracted data, assigning dynamic risk levels to flag anomalies before they reach the review stage.

Auto Disbursement (Zero-Friction Settlement)

Eliminates the final manual step in the settlement timeline. Once HR approves and Finance authorizes, funds are routed instantly for eligible categories. No inter-department handoffs; no bypassed governance.

The Result: *The employee submits, the AI evaluates, HR decides, Finance authorizes, and the money moves—all within a single, unbroken workflow.*

Reclaim

SWOT ANALYSIS

S Strengths	W Weaknesses	O Opportunities	T Threats
• Only platform with AI compliance + Fraud Trap + Finance-gated auto disbursement in one pipeline • Three-agent LangGraph architecture — technically complex and hard to replicate • Automatic LLM fallback ensures zero-downtime enterprise SLA • HR and Finance retain full final authority over every decision • Policy Studio — one PDF upload, AI enforces it on every claim instantly	• ERP and banking integrations require setup during onboarding • OCR accuracy dependent on receipt image quality • Limited brand recognition vs SAP Concur and Expensify • Long enterprise sales cycles before first revenue conversion • New entrant with no existing enterprise client reference base	• 47% of companies still manual — no dominant AI-native competitor exists • ~20,300 immediate enterprise targets in Malaysia and Indonesia • ~122,800 large enterprises across SEA as long-term vision • Malaysia national digitalization agenda driving Finance automation • Post-pandemic travel rebound increasing claim volumes across SEA	• SAP Concur and Expensify could add AI compliance to existing platforms • LLM provider pricing or availability could affect system reliability • Evolving data privacy regulations may require costly adjustments • Competitors may close deals during Reclaim's pilot negotiations • Economic slowdown could deprioritize enterprise automation budgets

Reclaim

06 Competitor Analysis

YTL AI LABS

Z.AI

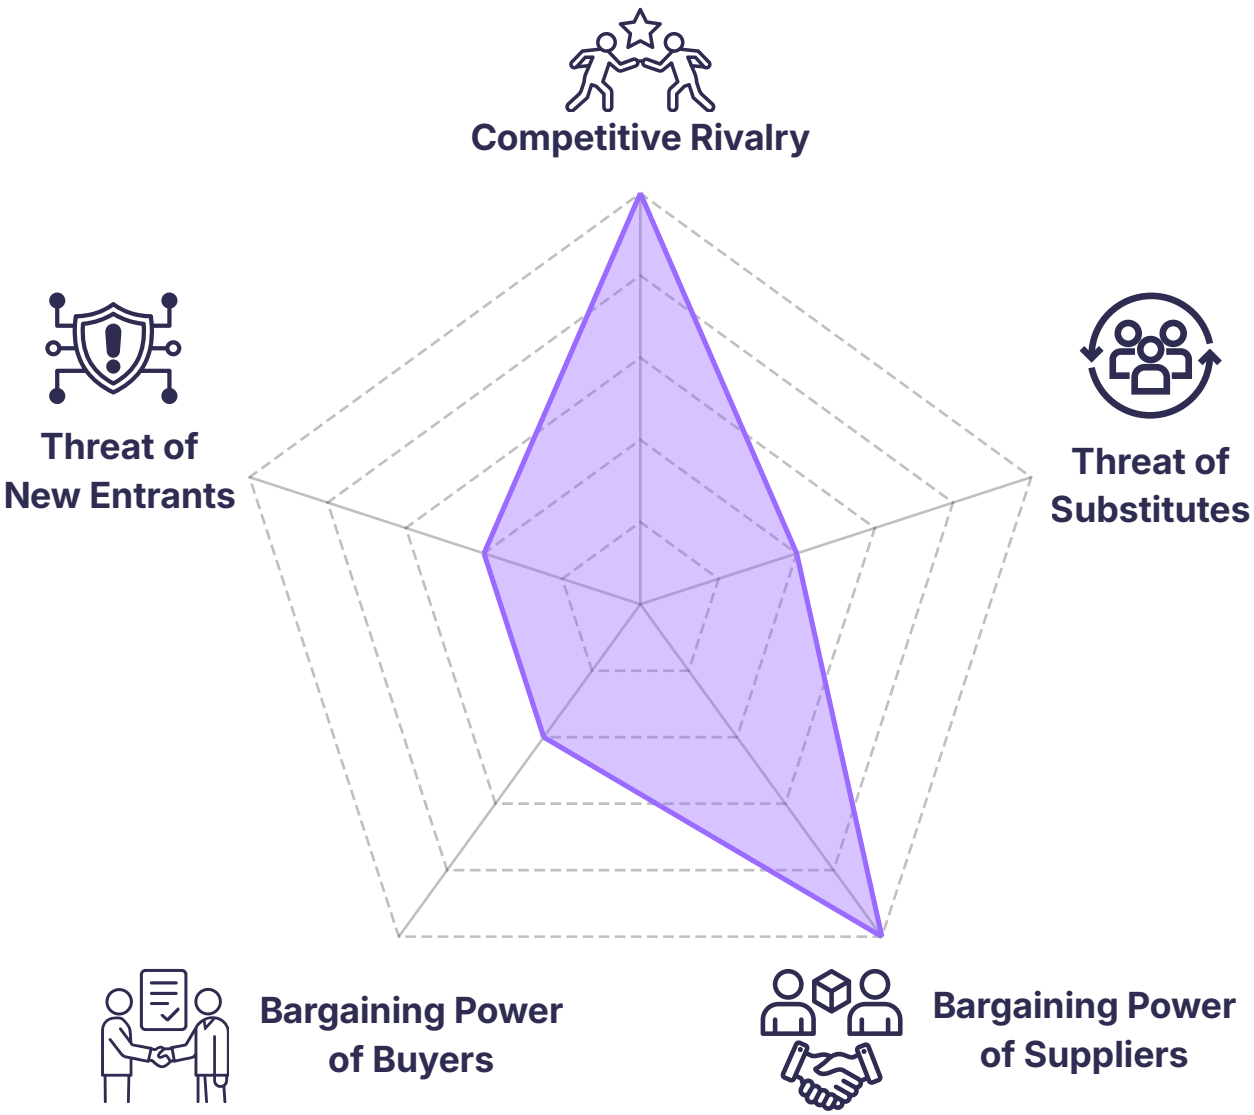
UNIVERSITY OF MALAYA

PEKOM

UM Hackathon 2026

Reclaim

PORTER'S FIVE FORCES



PORTER'S FIVE FORCES

Force	Intensity	Assessment
Competitive Rivalry	Medium	While established players like **SAP Concur and Expensify** dominate enterprise expense management, none currently offer **AI-native compliance pre-screening or policy-grounded evaluation**. Direct competition in Reclaim's specific capability space remains limited — rivalry is **moderate rather than intense**, with differentiation being the primary competitive battleground rather than price or volume.
Threat of New Entrants	Low	Building a **production-grade multi-agent compliance pipeline** with **policy-grounded RAG evaluation, fraud detection, and enterprise-grade audit trails** requires significant **AI engineering depth** and domain expertise. The complexity of the full pipeline — from **policy ingestion** to **bank disbursement** — creates a high technical barrier for new entrants to replicate at enterprise quality.

Reclaim

PORTER'S FIVE FORCES

Bargaining Power of Buyers	Medium	**Large enterprise** buyers have **procurement leverage and long sales cycles**, requiring Reclaim to demonstrate **clear ROI through a pilot-first approach**. Reclaim's **compliance defensibility** and Finance governance directly address the top procurement concern — reducing **price sensitivity** over time.
Bargaining Power of Suppliers	Low	**LLM API providers** (ILMU, OpenRouter) are **commoditizing rapidly**. Reclaim's automatic fallback architecture (GLM-5.1 → Gemini 3.1 Flash Lite) ensures **no single model provider holds operational leverage.** Banking API providers are increasingly standardized under open banking frameworks across Southeast Asia.

Reclaim

PORTER'S FIVE FORCES

Threat of Substitutes	Low	The primary substitute is the existing **manual HR workflow** — familiar **but operationally unsustainable at enterprise scale.** No current enterprise substitute combines **AI-native compliance evaluation, structural fraud detection, Finance-controlled auto disbursement, and a full immutable audit trail within a single deployed system.**

Reclaim

COMPETITOR COMPARISON TABLE

Competitor	Strength	Weakness	Reclaim Advantage
SAP Concur	Enterprise-grade, deep ERP integration, global enterprise presence	No AI-native compliance pre-screening; rule-based only; high implementation cost and long deployment timelines	Faster enterprise deployment, AI-first compliance evaluation with per-receipt reasoning, Fraud Trap, and Finance-gated auto disbursement — no heavy ERP dependency required

COMPETITOR COMPARISON TABLE

Expensify	Strong mobile UX, SmartScan OCR, widely adopted at mid-market	No policy-grounded compliance agent; no per-receipt verdict with audit reasoning; not built for complex enterprise policy enforcement	Reclaim evaluates against the enterprise's actual uploaded policy — not generic rules — with full explainability and a structured fraud signal layer
Brex coupa	Strong spend management and corporate card integration	Focused on spend controls at point of purchase, not post-submission compliance evaluation and reimbursement workflows	Reclaim targets the reimbursement gap — the claims that happen outside corporate cards — with AI compliance evaluation, Finance authorization, and automatic settlement

Reclaim

COMPETITOR COMPARISON TABLE

LOCAL MANUAL WORKFLOWS	Zero licensing cost, deeply familiar to HR and Finance teams	Zero scalability, no audit trail, inconsistent policy enforcement, 5–10 day turnaround, high compliance risk	Full pipeline automation from receipt to bank transfer, immutable audit trail, minutes-long turnaround, and consistent policy enforcement across every claim

Reclaim

UM Hackathon 2026

GO-TO-MARKET STRATEGY

Reclaim adopts a **vertical, direct enterprise sales strategy.** Rather than pursuing a broad market, Reclaim **focuses specifically on large organizations** in three high-value verticals: **insurance, financial services, and professional services**. These industries experience the **highest reimbursement claim volumes**, possess the most complex policy structures, and operate under strict regulatory compliance requirements. The primary target is the Chief Financial Officer (CFO), Financial Controller, or Head of Audit.

Phase 1: Pitching

Reclaim begins with a hyper-focused outbound sprint targeting **50 large tier insurance and financial services firms in Malaysia.** To secure meetings with CFOs, the sales approach bypasses generic pitches. Instead, **Reclaim engineers will extract a target company's publicly available** employee handbook or travel policy and feed it into the Policy Studio pre-meeting. The initial demo will show Reclaim **instantly processing a live receipt against the prospect's actual company rules**, immediately **proving technical viability.**

Reclaim

GO-TO-MARKET STRATEGY

Phase 2: Pilot

Enterprise software implementation can take up to **9 months.** To accelerate adoption, Reclaim does not sell a full annual license on day one. Instead, the objective is to **secure a signature** for a structured 3-month paid pilot.

The Structure

The pilot is priced at a flat fee (e.g., RM 30,000), which falls under the discretionary spending limit of most enterprise Finance Directors.

The Guarantee

The pilot is tied to specific success metrics: reducing Finance processing time by **≥60% and achieving an AI agreement rate of ≥80%.**

The Rollover

If Reclaim hits these metrics and the enterprise signs the annual contract, the initial pilot fee is fully deducted from their first-year base license.

GO-TO-MARKET STRATEGY

Phase 3: Partnership

At the end of the pilot, Reclaim does not present a sales pitch; it presents a "**Pilot Audit Report**." By showing the CFO a customized dashboard detailing **the exact hours saved, fraud signals caught, and compliance violations** automatically enforced on their own company's data, the conversion to a full enterprise license agreement becomes a mathematically **undeniable** operational decision.

Phase 4: Proliferation

As Reclaim builds a base of **8-10 reference clients** in Malaysia and Indonesia, the go-to-market strategy will expand. Direct outbound sales will be supplemented by strategic channel partnerships with established ERP and payroll system integrators (e.g., SAP/Oracle consultancies). These partners will offer Reclaim as a **value-add** compliance module to their existing enterprise clients. By Year 2, documented ROI case studies from Malaysian financial clients will serve as the primary sales asset for expanding into the **Southeast Asia regions and the eventual global** enterprise market.

Reclaim

IMPLEMENTATION PLAN

Phase	Action	Timeline	Target
Pilot Program	5-7 large enterprise pilot clients in Malaysia	Month 1–3	HR time savings ≥60%, AI agreement rate ≥80%
First Commercial Contracts	Convert pilots to full licenses; run parallel outbound to close early adopter deals	Month 3–9	3-5 signed enterprise license contracts, RM 390K–650K in committed ARR
Product Maturity & Integration	ERP and banking API integrations, admin portal, async processing, Row-Level Security	Month 9–15	Churn <5%, NPS >50
Indonesia & SEA Expansion	Leverage Malaysian case studies for Indonesia outbound; establish first SEA clients outside Malaysia; lay groundwork for broader SEA expansion	Month 12–18	3–5 Indonesia enterprise clients; SEA expansion roadmap confirmed
TOTAL	RM 2.5M seed investment	18 Months	8–10 enterprise clients across MY + ID, RM 1.0M–1.3M ARR

Reclaim

REVENUE PROJECTIONS (3-YEAR)

	YEAR 1	YEAR 2	YEAR 3
ACTIVE ENTERPRISE CLIENTS	6	16	30
AVERAGE CONTRACT VALUE	RM 150,000 /year	RM 175,000 /year	RM 195,000 /year
IMPLEMENTATION, INTEGRATION, MAINTENANCE, AND SUPPORT REVENUE	RM 350K	RM 875K	RM 1,75 M
TOTAL REVENUE	RM 1.25M	RM 3.68M	RM 7.6M

Reclaim

KEY FINANCIAL MILESTONES

MONTH 3

5–7 enterprise paid pilots completed in Malaysia; Finance processing **time savings ≥60% and AI agreement rate ≥80%** validated on live client data; **RM 125,000–175,000** in pilot revenue collected

MONTH 9

3–5 pilots converted to full annual license agreements; first Indonesia outbound campaign launched using Malaysian case studies; **RM 390,000–650,000** in committed ARR

MONTH 15

ERP and banking API integrations live; **Auto Disbursement deployed** for first clients; **14-18 enterprise clients across Malaysia and Indonesia**; RM 1.0M–1.3M (license only)

MONTH 18

SEA expansion roadmap confirmed; **channel partnerships** with ERP and payroll integrators established; **product maturity** release with admin portal and Row-Level Security

MONTH 24

Cash flow positive; **15+ enterprise clients across SEA**; feasibility review for broader Southeast Asia **expansion beyond Malaysia and Indonesia**
